Question 1
Machine efficiency is calculated by dividing by
a) Effective capacity by Design capacity
b) Achieved capacity by Design capacity
c) Achieved capacity by Effective capacity
d) Design capacity by Achieved capacity
Question 2
Which of the following is the key benefit of multi-vari charting?
a) It keeps track of the time when measurements were made
b) It graphically displays the variation in a process
c) It assists in the breakdown of components of variation
d) It is much easier to plot than most control charts
Question 3
Which of these is not one of the ten guiding principles of continuous improvement proposed by Robert Lowson
(2002)?
a) Operations orientation
b) Total employee involvement
c) Effective leadership
d) Adaptability to change
Question 4
Before improvements can be made to a process there need to be clear procedures and agreed working practices
established. These are normally in a written form, called?
a) Continuous Improvement Procedures
b) Process Control Procedures
c) Standard Operating Procedures

d) Quality Improvement Procedures

Question 5

What additional factor does Overall Equipment Effectiveness take into account which makes it more meaningful than efficiency or utilization?

- a) Flexibility
- b) Speed
- c) Cost
- d) Quality

Question 6:

Which of the following tools helps in visualizing series of causes to an effect?

- a) Cause and Effect Matrix
- b) Correlation Diagram
- c) Ishikawa Diagram
- d) Value Stream Mapping

Question 7

Which of the following is not a reason which may prevent the successful adoption of a continuous improvement program?

- a) Lack of trust by employees in management motives
- b) No clear purpose for the programme
- c) Incentives scheme linked to the programme
- d) Resistance to change

Question 8

One of the purposes of using a fishbone diagram is to:

- a) Separate a problem into smaller components
- b) Identify and classify sources of variations into major groups
- c) Define the problem in sequential order
- d) Show the relationship between parameters

A technique devised by Kaplan and No	orton (1992) to meası	ure performance acros	s four different
operating areas			

is known as _____?

- a) Brainstorming
- b) Benchmarking
- c) Balanced Scorecard
- d) Quality circle

Question 10

In a typical MSA GAGE RR study conducted, what should the Six Sigma team determine about the Measurement System first?

- a) Accuracy
- b) Stability
- c) Resolution
- d) Linearity

Question 11

Production and operations management includes all the activities of managers to create goods and services.

- a) True
- b) False

Question 12

Which of the following is the LEAST likely tool to assist the problem definition stage of Six Sigma?

- a) CTQ trees
- b) Pareto analysis
- c) Product yield data
- d) Control charts

b) Modification

c) Invention

In a typical Measure Phase, which of the following activities should a Green Belt perform first?
a) Stabilityb) Capabilityc) MSA
d) Normality
Question 14
The manufacturing of a car is an example of:
a. assembly process.
b. analytic system.
c. chemical process.
d. transport process.
Question 15
A technique for getting ideas for innovation and improvement from other sources outside of an organization, is
called?
a) Balanced Scorecard
b) Brainstorming
c) Benchmarking
d) Open Innovation
Question 16
The development of a novel idea is called?
a) Innovation

17. A change which is created through a series of small improvements is calledinnovation?
a) Step change
b) Disruptive
c) Radical
d) Incremental
18. A facelift for an existing brand or product is known as which type of innovation?
a) Modification
b) Restaging
c) New product
d) Invention
19. The four stages of a new product or new service development process are; formulate ideas, decide on whether to
proceed, evaluate the outcome and?
a) Screen the ideas
b) Business analysis
c) Test the design
d) Launch the product
20. Utility is created when raw materials and labour are converted into finished goods.
a) time b) form c) place d) product
21. The creation of goods and services using the factors of production is called:
a) production.

d) Improvement

b) assembly process.

d) financial management. 22. Which of the following scenarios is best suited to use an X-bar and R chart? a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process		c)	research and development.
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process		d)	financial management.
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
a) A smaller sample size is needed b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
b) It is necessary to know when to investigate a process for causes of variation c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process	22.	Wh	ich of the following scenarios is best suited to use an X-bar and R chart?
c) The machine capability is wider than the specification d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process		a)	A smaller sample size is needed
 d) An acceptable quality level must be established 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase? 		b)	It is necessary to know when to investigate a process for causes of variation
 23. When a cause-and-effect diagram is used to solve plant problems, what are the three parts a session is customarily divided into? a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase? 		c)	The machine capability is wider than the specification
a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process		d)	An acceptable quality level must be established
a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
 a) Teamwork, cost-effectiveness, efficiency b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 	23.	Wh	en a cause-and-effect diagram is used to solve plant problems, what are the three parts a
 b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 			
 b) Brainstorming, prioritization and plan development c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 			
c) Teamwork, planning and execution d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?		•	
d) Cost-effectiveness, plan development, teamwork. 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process			
 24. "Forming, Storming, Norming, and Performing" are terms that describe a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?		•	
 a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?		d)	Cost-effectiveness, plan development, teamwork.
 a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?			
 a) Process variation reduction and improvement phases b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?			
 b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?	24.	"Fo	orming, Storming, Norming, and Performing" are terms that describe
 b) Root Cause identification and corrective action c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?		a)	Process variation reduction and improvement phases
c) Stages of team growth d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?			
d) Steps of the brainstorming process 25. Which item should not be identified in the Define Phase?			
25. Which item should not be identified in the Define Phase?		-	
		,	Opposition of the state of the
a) Root Causes	25.	Wh	ich item should not be identified in the Define Phase?
		a)	Root Causes
b) The key problem area		- 1	
c) Possible financial loss		-,	
d) Intangibles		,	

26. The distribution that follows principles of an exponential distribution is:

a) Poissonb) Binomialc) Chi-Squared) Normal

27. I	or	small incremental changes which Japanese technique is useful?
	a) b) c)	Kaizen Poka-Yoke Kata
1	d)	Mura
28. I	Pok	a-yoke is best defined as:
	a) b) c) d)	Capturing the voice of the customer Improving machine efficiency Reducing field failures to virtually zero Preventing controllable defects
		ich of the following is NOT necessary for the Six Sigma team to update in the Project Charter in in Phase?
Proj	ect	Name and Description
Busi	nes	ss need
Proj	ect	purpose
Con	stra	aints
Que	stic	on 30
The	var	iations resulting from common causes are attributed to
a. ar	n in	control situation which should not be investigated.
b. ar	n in	control situation which should be investigated.
c. ar	ι οι	ut of control situation which should not be investigated.
d. ar	า	ut of control situation which should be investigated.

Question 31
There are 5 basic organizational forms, simple, functional, divisional, conglomerate and?
a) hybrid
b) complex
c) corporate
d) hierarchical
Question 32
Operations can be diagnosed by volume, variety, variation and?
a) validity
b) variability
c) value
d) variance
Question 33
Services differ from manufactured products in four ways. Intangibility, Inseparability, Perishability and
a) homogeneity b) heterogeneity c) intractability d) invisibility
Question 34
Semi-finished stock is also known as inventory.
a) Pipeline
b) Cycle
c) Work in Process

d) Anticipatory

Question 35

Which of these reasons to keep inventory can lead to improved quality?

- a) It allows processes to flow more smoothly.
- b) It makes deliveries more reliable.
- c) It helps to deal with short term demands.
- d) It enables the best material to be sorted prior to production.

Question 36

What do the letters EOQ stand for?

- a) Estimated Order Quantity
- b) Economic Order Quantity
- c) Estimated Order Quality
- d) Economic Order Quality

Question 37

Goods in transit can be tracked using RFID technology. RFID stands for?

- a) Remote File Identification
- b) Resource Frequency Identification
- c) Radio Frequency Identification
- d) Radar Frequency Identification

Question 38

A quality criterion which can be measured is called a _____?

- a) Quality characteristic
- b) Quality component
- c) Quality attribute
- d) Quality variable

Question 39 The EOQ of an item is calculated using the annual demand together with the _____ cost and the _____ cost. a) Ordering and Holding costs b) Indirect and Holding costs c) Direct and Ordering costs d) Direct and Variable costs Question 40 Continuous improvement is primarily concerned with which of these criteria? a) Cost

Question 41

b) Quality

c) Flexibility

d) Dependability

What are the basis of competition for Indian manufacturing companies?

- a) All of these
- b) improved quality
- c) high performance products
- d) reduced cost

Question 42

Which product and process design tool subject models to Finite Element Analysis?

- a) CAD
- b) CAE
- c) JIT
- d) PDM

Question 43

Who is largely attributed to developing World-Class manufacturing?

- a) Dr. W. Edwards Deming
- b) Walter A. Shewhart
- c) Philip Crosby
- d) Taiichi Ohno

Which stage in the production process does production leveling is applied?

- a) Depends upon the flow
- b) Last
- c) First
- d) Depends upon process

Question 45

What will happen if a sample of parts is measured and also the mean of the sample measurements is outside the control limits?

- a) The process is in control, but not capable of producing within the established control limits
- b) The process variance must also be in control.
- c) The process is within the established control limits with only natural causes of variation
- d) The process is out of control and the cause can be established.

Question 46

How can an improvement in a system be defined, statistically?

- (1) An improvement in the mean outcome.
- (2) A decrease in the system variability.
- (3) A correction of an assignable cause.
 - a) Only (1) and (3)
 - b) Only (2) and (3)
 - c) Only (1) and (2)
 - d) All of these

Question 47

How was the success of a company measured during the industrial age?

a) Exploit intangible assets

- b) Economies of scale
- c) Mobilize employee skills
- d) Customized high-quality products

What does KPIV relate to?

- a) Inputs
- b) Incremental Variation
- c) Incrementing Variation
- d) Inherent Variation

Which of the following focuses on proactive and progressive maintenance of equipment by utilizing the knowledge of operators?

- a) Six Sigma
- b) Total Productive Maintenance
- c) SMED
- d) 5S

Question 50

Which of these would help to encourage dynamic innovation within an organization?

- a) A bureaucratic culture
- b) Involvement of external consultants
- c) Deregulated markets
- d) A formal research and development department
- 51. Cause and Effect Diagram is not known as!
 - a) Ishikawa Diagram
 - b) 4-M
 - c) Affinity Diagram
 - d) None of the above

52. What is the technique to trace the rule responsible for the problem and break the assumption for the process?
a) Assumption Busting
b) Analogy Technique
c) Benchmarking
d) Constrained Brain writing
53. What is lean philosophy?
a) Helps to provide a perfect value through a perfect value creation process that has zero waste
b) Continuous Improvement
c) Higher output by encouraging people to work hard and have targets

- 54. When samples are drawn out of a population randomly, what is said to be true?
 - a) The sample mean is always the same as the population mean
 - b) The sample standard deviation will be the same as population standard deviation
 - c) The sampling distribution approaches normality with an increase in sample size
 - d) The sampling distribution would be triangular if the population is distributed as a triangular distribution

d) Reducing cost and improving purchasing power. When samples are drawn out of a population

- 55. Which of the following tools is most commonly used in the define phase of a project?
 - a) Affinity diagram
 - b) Control chart
 - c) Failure mode and effects analysis

randomly, what is said to be true?

- d) Data collection checklist
- 56. Which of these is considered a prioritization tool?
- a) Multi-voting
- b) Customer needs prioritization
- c) Focus Groups
- d) Nominal Group Technique
- 57. Standard Deviation in Six Sigma applications is referred to as the difference from the:
 - a) Target

- b) Specification limits
- c) Nearest fit value
- d) Mean
- 58. Which of the following statistical tests should be used by the Green Belt for testing the means between two inter-related groups?
 - a) 2 Sample t assuming equal variances
 - b) 2 Sample t assuming unequal variances
 - c) Paired t-test
 - d) z test

- a) Continuous Improvement
- b) Prevent Defects
- c) Creating a productive work environment
- d) Reduce Variation
- 60. What does OEE stand for?
 - a) Overall Equipment Effectiveness
 - b) Overall Estimation Effectiveness
 - c) Overall Equipment Estimation
 - d) Overall Effective Estimation
