Research Methodology

Maximum Marks: 60

**Total Questions:7** 

**Print Pages: 3** 

Note: 1) Q1 is compulsory carry 20 marks

2) Answer any 4 questions from remaining 6 questions each carry 10 marks

Q1 (a) State wether following are True or False (15Marks)

| No | Statement  |
|----|--|
| 1  | Research is not systematic inquiry that uses disciplined methods to answer           |
|    | questions or solve problems.   |
| 2  | A problem statement is an expression of dilemma or disturbing situation that needs   |
|    | investigation.   |
| 3  | Closed ended questions allow participants to respond to question in their own words  |
| 4  | Interview after the possibility of complete anonymity.                               |
| 5  | When an attribute is extremely varied in the group under investigation, the group is |
|    | said to be heterogeneous   |
| 6  | In non experimental research, researchers make observations of existing situations   |
|    | and characteristics without intervening.   |
| 7  | Research questions direct rewording of statements of purpose interrogatively rather  |
| E  | than declaratively.  |
| 8  | Background of the problem need to provide a brief, focused review of the literature  |
| 9  | The proposal is comprehensible to only expert in the field                           |
| 10 | The most common scaling technique is the visual analog scale.                        |
| 11 | Sample in Qualitative Research is large sample.                                      |
| 12 | Life histories are narrative self disclosures about individual life experiences      |
| 13 | Researcher used standardized instruments in Qualitative Research.                    |
| 14 | Open ended questions are more difficult to construct                                 |
| 15 | Qualitative Research is test theories.   |
|    |  |

- Q1 (b) Identify the type of scales in each case. (5 Marks-Write only answers in answer sheet)
- The data you're collecting consists of the time taken by different participants to complete a word puzzle.
- ii. The experiment compares the number of words remembered by people of different ages.
- iii. The results of your study consist of the numbers of five-, ten- and fifteen-year-old children who can concentrate for five minutes.
- iv. The results of your study consist of self-rated happiness scores given by participants.
- v. Level of happiness is rated from 1 to 10.

# Q2 Answer any two from the following (10 M)

Differentiate between:

- (a) Basic research and Applied research
- (b) Probability sampling and Non-Probability sampling
- (c) Simple Random Sampling and Stratified Random Sampling
- Q3 Answer any two from the following (10 M)
- (a) What is secondary data? What are the sources of secondary data collection?
- (b) What is sample? Enumerate the factors to be considered while deciding the sample size.
- (c) Discuss in detail steps involved in research process.
- Q4 Answer any two from the following (10 M)
- (a) What is hypothesis testing? What are the types of hypotheses? Explain the errors incurred in hypotheses testing.
- (b) Enumerate the different methods of collecting data. Explain its merits and demerits.
- (c) What is experimental Research Design? How is it different from Exploratory Research Design?

Q5 Answer any two from the following (10 M)

Write short notes on:

(a)In-depth interviews (b)

(b) Projective Techniques

(c) Focus Groups

Q6 Answer any two from the following (10 M)

- (a) Give the true meaning of research. Write its characteristics. Discuss its various types at length.
- (b) A genetics engineer was attempting to cross a tiger and a cheetah. She predicted a phenotypic outcome of the traits she was observing to be in the following ratio 4 stripes only 3 spots only, 9 both stripes and spots. When the cross was performed and she counted the individuals she found 50 with stripes only, 41 with spots only and 85 with both. Did she get the predicted outcome?
- (c)The following is the information on likes-dislike about Hero-Honda bike across different age groups:

|          | Age Group |       |       |       |  |
|----------|-----------|-------|-------|-------|--|
|          | Below 20  | 20-39 | 40-59 | Total |  |
| Liked    | 125       | 420   | 60    | 605   |  |
| Disliked | 75        | 220   | 100   | 395   |  |
| Total    | 200       | 640   | 160   | 1000  |  |

Can we conclude that the scooter model appeal independent of age groups?

# Q7 Identify below from the following tables:

#### **Model Summary**

| Model | R     | R Square | Adjusted R<br>Square | Std. Error of<br>the Estimate |
|-------|-------|----------|----------------------|-------------------------------|
| 1     | .963ª | .926     | .926                 | 6.684                         |

### **ANOVA**<sup>b</sup>

| Model |            | Sum of<br>Squares | df  | Mean Square | F.       | Sig.  |
|-------|------------|-------------------|-----|-------------|----------|-------|
| 1     | Regression | 559066.290        | 5   | 111813.258  | 2502.616 | .000ª |
|       | Residual   | 44410.485         | 994 | 44.679      |          |       |
|       | Total      | 603476.775        | 999 |             |          |       |

a. Predictors: (Constant), x5, x4, x1, x3, x2

#### Coefficients<sup>a</sup>

| Model |            | Unstandardized Coefficients |            | Standardized<br>Coefficients | 4      |      |
|-------|------------|-----------------------------|------------|------------------------------|--------|------|
|       |            | В                           | Std. Error | Beta                         | t      | Sig. |
| 1     | (Constant) | 38.067                      | 1.940      |                              | 19.622 | .000 |
|       | x1         | 15.536                      | .205       | .654                         | 75.918 | .000 |
|       | x2         | 11.994                      | .200       | .519                         | 59.999 | .000 |
|       | х3         | 8.365                       | .201       | .359                         | 41.554 | .000 |
|       | x4         | 4.574                       | .197       | .200                         | 23.240 | .000 |
|       | x5         | .872                        | .201       | .037                         | 4.329  | .000 |

a. Dependent Variable: y

Answer any two from the following (10 M)

- a) Dependent and Independent Variables, Interpret on R Square value
- b) Write Regression equation and Estimate regression intercept
- c) Write Regression equation and Calculate R Square value using ANOVA table

### Use below values if required:

| Degree of freedom      | 1     | 2     | 3,    | 4    | 5      |
|------------------------|-------|-------|-------|------|--------|
| Chi Square value at 5% | 3.841 | 5.991 | 7.815 | 9.49 | 11.070 |
| sig                    |       |       |       | 1.84 |        |

\*\*\*\*\*\*

b. Dependent Variable: y
