	TechVision Pvt. Ltd., a fast-growing software development company,										
	has seen remarkable expansion over the past few years. With over 500 employees and offices in multiple countries, the company is now facing several challenges in managing its human resources efficiently. As the business grows, TechVision is finding it increasingly difficult to ensure it has the right number of skilled employees to meet its needs. Recruitment processes are taking longer than expected, and the manual systems being used for performance management, employee records, and payroll are starting to create inefficiencies.										
	modernize its I has introduced which include performance the company has set tools for tasks workforce fore Despite the int is facing signiff The company technologies set	egration of these technological	nology. forecast future talent requirements for upcoming projects, making it			I
difficult to ensure the right talent is in place at the right time.			
Even with a large number of employees, TechVision is facing skill gaps in critical areas needed for the company's expansion. Although the company has launched an online learning platform to upskill its employees, it is not effectively addressing the growing demand for specialized skills. The HR team has struggled to identify which specific skills need to be developed for the future, and the employees are not engaging fully with the training programs, leading to slow progress in closing skill gaps.			
faces resistance from a portion of its HR staff, particularly those who have worked in traditional, manual systems for years. This resistance has slowed down the full integration of the new HRMS system. HF staff are not fully utilizing the system's potential, particularly in strategic areas like workforce forecasting and succession planning			
The introduction of HRMS and AI tools has led to an overwhelming amount of data being generated. While this data holds potential for improving decision-making, the HR team has struggled to interpret and utilize it effectively. The company is unable to derive actionable insights from the data regarding employee performance, engagement, and future workforce needs. The lack of effective data analytics capabilities is preventing HR from making informed, strategic decisions.			
While technology has automated basic HR tasks, it has not yet been fully integrated into the company's strategic HR planning. The HR team is struggling to align HR practices with the company's fast- paced growth, and the current technology solutions are not meeting the needs of the business.
